

Handifill

MANUAL VOLUMETRIC FILLING MACHINE

Designed for use by laboratories, pharmacies, companies with a limited budget or where a power source is not available, Handifill provides the perfect solution. Low cost units, yet engineered to the same exacting standard as all of Universal's filling machines.

Cream & gel type products as well as liquids are easily filled, using only one valve system & are accurate to $\pm 0.5\%$ down to half the piston stroke. Using four interchangeable metering cylinder assemblies the range of fill is 5cc to 630cc.

The product is dispensed by pulling a lever which moves the metering piston forward. Volume change requires no tools and is set via the use of a simple adjustable stop.
